

Row-level conservative replay on selected-300

Descriptive high-severity replay after primary endpoint failover; trigger budgets are rows, not model assessments.

SRES

10% budget

Triggered rows: 30

Severe remaining: 0

Unsafe remaining: 0

Critical remaining: 0

Tie worst-case severe: 0

20% budget

Triggered rows: 60

Severe remaining: 0

Unsafe remaining: 0

Critical remaining: 0

Tie worst-case severe: 0

CEIS

10% budget

Triggered rows: 30

Severe remaining: 0

Unsafe remaining: 0

Critical remaining: 0

Tie worst-case severe: 0

20% budget

Triggered rows: 60

Severe remaining: 0

Unsafe remaining: 0

Critical remaining: 0

Tie worst-case severe: 0

max(SRES, CEIS)

Variant count

Baseline: 6 row-level severe misses, 22 unsafe downrouting rows, and 1 critical miss. Variant-count is a stress test for max-over-variant
